

Diego Agustín Urenda

Software Developer · Computer Systems Analyst student

Profile

I build custom software for real businesses. I work in technical sales and service at a heating company and, in parallel, as an independent developer, I built on my own initiative the tools it now uses every day: installation design, online sales, and technical service management. AI and agents are a core part of my workflow, always with the judgment to review, validate, and understand what gets built.

Experience

Software Developer · Self-employed

For Delmar Calefacción S.A.S. · Dec 2025 – present

Self-initiated projects, built in parallel with my sales role.

- **Warmia:** heating load web app that digitized a paper-based method used for over 40 years, cutting installation design time from 3–4 hours to 1 hour or less. 50+ projects and 102 automated tests. (React, Konva, Zustand, Supabase)
- **Nexo Delmar:** syncs stock, prices, and sales for ~300 products across MercadoLibre and Tienda Nube, replacing manual inventory counts that took hours. Pricing engine based on real API fees, webhooks with failure recovery, and MercadoPago reconciliation. (Python, FastAPI, PostgreSQL, React, TypeScript)
- **Caldera Care:** technical service management system used daily for 10–15 customers a day, providing per-technician metrics that did not exist before. (React, TypeScript, Supabase, PL/pgSQL)
- **Internal tools:** data migration from a legacy Clipper/FoxPro system, and integration with the tax authority web service (AFIP/ARCA) to correct the VAT status of ~1,800 customers. (JavaScript, Python)

Technical Sales and Service

Delmar Calefacción S.A.S. · Villa María · Jun 2025 – present

- Design and sale of central heating systems with radiators and radiant floor heating, from installation sizing to the final quote.
- Customer service and technical advice to customers and installers, answering questions about equipment, installations, and products.
- Technical service and repair of heating equipment and installations.
- Catalog and listing management on MercadoLibre and Tienda Nube, plus monthly accounting reconciliation.

Service Station Attendant

Shell service station · 2015 – 2025

- Customer service, cash handling, and day-to-day problem solving over ten years.
- IT support for the point of sale.

Academic project

Monix · web and Android home banking app

Professional Practice I · team project · monix-homebanking.vercel.app

Integrated with a simulated Central Bank API: transfers, real-time balance, loans based on credit status, and QR, NFC, and Bluetooth payments. (React, TypeScript, Supabase, Capacitor)

Villa María, Córdoba, Argentina

Skills

Frontend

React, TypeScript, JavaScript, Tailwind

Backend

Python, FastAPI, SQLAlchemy

Data

PostgreSQL, Supabase, PL/pgSQL

Integrations

REST APIs, OAuth 2.0, webhooks, MercadoLibre, Tienda Nube, AFIP

Infrastructure

Vercel, Render, Linux, nginx

Testing

Vitest, pytest

How I work

AI-assisted development with agents, end to end

Languages

Spanish: native

English: C2 Proficient (EF SET 77/100)

Education

Computer Systems Analyst

Instituto Leibnitz

2025 – 2027 (expected)

High school diploma, Computer Science track

Instituto La Santísima Trinidad

2010 – 2016

Certifications

Linux, beginner level

Instituto Leibnitz · 2026

EF SET English Certificate (C2)

EF · 2021 · efset.org/cert/JsXiSg
